PROFESSIONAL SUMMARY

Frontend-focused Software Engineer with 3 years of experience building production web applications across fintech, marketplace, and education platforms. Strong in JavaScript, TypeScript, React, Next.js, responsive UI development, API integration, state management, testing, and web performance optimization. Experienced working closely with backend systems to deliver secure, scalable, and data-driven user experiences.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Java, Python
Frontend: HTML5, CSS3, React.js, Next.js, Vue.js, React Native, Tailwind CSS, Styled-Components, Zustand, Redux
Testing: Jest, Unit Testing
Backend & APIs: Node.js, Express.js, NestJS, REST APIs, API Integration, SQL, PostgreSQL, Prisma ORM, MongoDB, Axios
Tools & Infrastructure: Git, GitHub, Docker, Vercel, EAS, Material UI
Web Development: Responsive Design, Mobile-First Development, Web Performance Optimization

PROFESSIONAL EXPERIENCE

Bloom AI

Jul 2026 - Present

Full-stack Developer | Lagos, Nigeria

- Built responsive dashboard interfaces for product, order, and cart management using Next.js, TypeScript, Tailwind CSS, and Zustand, integrating real-time backend state with responsive UI flows.
- Built Telegram channel integration across the frontend and backend, implementing real-time WebSocket flows for QR authentication, OTP, 2FA, connection status updates, and session reconnection using Redis Pub/Sub and BullMQ workers.
- Developed commerce functionality for products, orders, and carts, including product CRUD, bulk CSV imports with SKU deduplication, transactional cart operations, order management, payment history, and dashboard metrics.

Viigo

Mar 2026 - August 2026

Mobile Developer - Contract | India (Remote)

- Built and shipped the core booking marketplace powering Viigo's two-sided platform (gym owners and users) using React Native and Expo, including GPS discovery, live slot pricing, and Razorpay payment integration; published the application to the Google Play Store.
- Designed the hourly slot-selection and live-pricing flow with automated test coverage for shared booking logic, identifying pricing and availability issues before release across the user and owner applications.
- Implemented JWT authentication with automatic token refresh, Google OAuth, and OTP login with persistent sessions, improving authentication reliability and reducing unnecessary user re-authentication.

ORR Solutions

Dec 2025 - Mar 2026

Frontend Developer - Contract | Remote

- Built a responsive, real-time financial analytics dashboard using TypeScript, Zustand, and Recharts, developing reusable data visualization and table components for scalable feature development.
- Implemented frontend security controls including RBAC, CSRF protection, and XSS prevention, validating protections against common attack vectors.
- Built a rich-text CMS, calendar-integrated meeting scheduler, and audit-logging system, giving the platform the compliance trail needed for enterprise/regulated clients

HNG

Oct 2025 - Dec 2025

Backend Track- Intern | Remote

- Built the API Gateway and Authentication microservices within a 5-service distributed notification system (NestJS, RabbitMQ, PostgreSQL), with circuit breakers and retry logic validated by tests to keep the system available during simulated service failures
- Built an asynchronous image-processing service (NestJS, BullMQ), offloading resize/compress/thumbnail work to background queues so upload requests stayed fast instead of blocking on processing.
- Developed a crypto risk-assessment agent (TypeScript, Groq AI/Llama 3.3 70B, CoinGecko API), automating a manual analysis workflow into real-time, on-demand risk scoring

Kloud6 Technologies

Nov 2024 - Oct 2025

Full-Stack Developer | Lagos, Nigeria

- Built and maintained a full-stack LMS for programming education across Nigeria, delivering 60+ features across responsive learning interfaces, assessments, payments, and live/recorded class experiences using React.js, Next.js, Node.js, and PostgreSQL.
- Developed interactive frontend features for assessments, assignments, course delivery, and role-based user experiences, integrating React/Next.js interfaces with backend APIs and application state.
- Implemented and tested frontend functionality with Jest, covering workflows for assessments and learning experiences.
- Integrated Stripe payment flows with access-code generation and automated PDF invoicing, connecting frontend payment experiences with backend services.
- Redesigned the company website, improving user engagement by 25%, conversion rates by 35%, and Google Lighthouse scores to 92+ across all metrics.

LASU CBT18

Nov 2024 - Sep 2026

Frontend Development Instructor | Lagos, Nigeria

- Developed and taught a structured Frontend Web Development curriculum covering HTML, CSS, and JavaScript.
- Created and assigned multiple capstone projects throughout the program to reinforce concepts and help students develop practical mastery of frontend development.

Frontend Developer - Contract | Canada (Remote)

- Built responsive e-commerce interfaces for a clothing marketplace using React.js and Tailwind CSS.
- Implemented server-state management and data fetching with TanStack React Query, integrating frontend components with backend APIs

SELECTED PROJECTS

StudyPay (Next.js, Solana Pay, TypeScript, PWA) | [Live Demo](#) | [GitHub](#)

Built a blockchain-based campus payment PWA for the Solana Students Africa Hackathon, cutting transaction fees from \$15–45 to under \$1 with 30-second transfers across multi-role dashboards (student, parent, vendor).

VOLUNTEERING EXPERIENCE

Technical Core Team Member | Google Developer Groups On Campus, LASU

- Contributed to building and maintaining core web applications for the team and mentored participants in a frontend development bootcamp organized by the community.
- Led the volunteer team for LASU TECH X 4.0, coordinating event operations that supported over 300 registrations and 200 attendees.

EDUCATION

Lagos State University

2022 - 2026

Bachelor of Science in Computer Science, CGPA: 4.47/5.0

Lagos, NG

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Database Management Systems, Web Development, Computer Networks, System Design
